

INTERNATIONAL SYMPOSIUM ON CHIRPED PULSE AMPLIFICATION

*Celebrating the Master of CPA,
GÉRARD MOUROU*

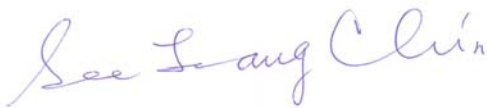

Laval University, Quebec City, Canada
November 17-21, 2010

2010 marks the 25th anniversary of the development of Chirped Pulse Amplification. This landmark technology constitutes the heart of most if not all modern ultrafast intense lasers. It has enabled the emergence of many new fields of research such as attoscience, extreme relativistic intensity, filamentation, biophotonics, femtosecond surgery, micromachining.

You are cordially invited to take part in a symposium celebrating this achievement. This celebration will bring together many of the representative laboratories from around the world that use CPA technology in addition to the outstanding scientists that made it possible, Gérard Mourou and Donna Strickland.

[For further details and registration, please visit the symposium website.](#)

We look forward to your participation.
